Past performance does not guarantee future results. Graph and CYR do not include the effects of sales charges and reflect reinvestment of all distributions. If sales charges were included, returns would have been lower. Holdings/sectors may vary. The holdings listed should not be considered a recommendation to buy or sell any security listed.

The Fund may invest in foreign securities, which are subject to currency fluctuation and political uncertainty; short sales, which involve costs and the risk of potentially unlimited losses; leveraging, which may magnify losses; and derivative securities, which may carry market, credit, and liquidity risks. These risks may result in greater share price volatility. There is no assurance the Fund's objective will be achieved.

Companies classified by Jennison Associates LLC are not sponsored by the S&P/MSCI GICS classification system). Please read the Fund's current prospectus for more detailed information regarding sales charge structure. Total return describes the return to the investor after net operating expenses but before any sales charges are imposed. SEC standardized return describes the return to the investor after net operating expenses and maximum sales charges are imposed. All returns assume share price changes as well as the compounding effect of reinvested dividends and capital gains. Returns may reflect fee waivers and/or expense reimbursements. Without such, returns would be lower. All data is unaudited and subject to change.

[†]The Russell 1000[®] Growth Index is unmanaged and contains those securities in the Russell 1000 Index with a greater-than-average growth orientation. Companies in this index tend to exhibit higher price-to-book and price-to-earnings ratios. The index and Russell are trademarks of the Frank Russell Company. An investment cannot be made directly in an index.

Average weighted market cap is the average market capitalization of stocks in a fund, each weighted by its proportion of assets. **Beta** measures a fund's sensitivity to changes in the overall market relative to its benchmark. The **P/E** ratio (Source: Morningstar, Inc.) relates the price of a stock to the per-share earnings of the company. P/E is calculated using a harmonic weighted average, which excludes outliers that can easily skew results. **Standard deviation** depicts how widely returns vary around its average and is used to understand the range of returns most likely for a given fund. A higher standard deviation generally implies greater volatility. **Turnover** is the rate of trading in a portfolio, higher values imply more frequent trading. Due to data availability, statistics may not be as of the current reporting period.

This Fund is available in the QP(k) and Lin(k) programs. As of August 1, 2002, establishing new qualified plans in these programs was discontinued. Current plan participants in qualified plans may continue to make contributions.
